1. Scribble Indentation

February 7, 2014

This document has two sections: scribble indentation rules and scribble indentation functions.

1   1.1 Scribble Indentation Rules

The scribble indentation rules are created based on the judgement of *parent parenthesis*. It will perform the indentation on each line of code based on two facts: check *parent parenthesis* and counting number of parenthesis till the outmost @ notation that the current line is in. Then the program will put spaces before each line of code based on how many *parent parenthesis* outside and following rules.

2   1.1.1 Parenthesis judgement rules

- Tab adjusted:

```
@itemlist[@item{item1}
          @item{item2}]
```

- One-space adjusted:

```
@centered{
 @bold{blah}
 @italic{blah}
 }

@itemlist[
 @item{blah}
 @item{blah}]
```

3   1.2.1 Line breaking rules

1)Only handle text (inside {} or outside)
    2)Each paragraph shall not have more/less than given character number(e.g. 70). The last few "words" will be passed to the next line, or some "words" from the next line will be pass back to current line

blah blah
blah
